Professional Summary:

- ✓ Proficient Full Stack Developer with 3+ years of experience in designing, developing, and deploying enterprise-grade web applications using **.NET/.NET Core, Radzen Blazor, Microsoft Azure and AWS Lambda**.
- ✓ Strong hands-on experience in **front-end development** using **Radzen Blazor, HTML, CSS, JavaScript, and TypeScript** to build responsive and user-centric interfaces.
- ✓ Expertise in developing and consuming **RESTful APIs** using **.NET Core Web API** and integrating with cloud-native services using **Azure Functions** and **Azure API Management**.
- ✓ Experience in development of **.Net Core** and **REST API's**.
- ✓ Experience in Handling queries on **SQL server** database
- ✓ Skilled in managing and optimizing relational databases like **SQL Server** and **PostgreSQL**, ensuring high performance and data integrity.
- ✓ Experience in distributed version control systems like **Git** using CMD & tools like **visual studio**.
- ✓ Experience in defect tracking tools like **JIRA** and **Azure DevOps**.
- ✓ Experience in testing including **debugging, error checking, browser compatibility** and **accessibility testing**
- ✓ Good Web Application **debugging skills** using **Chrome Developers Tool** and **Visual Studio Code** Debugger extension.
- ✓ Experienced with various **IDEs** such as **Visual Studio Code** and **Notepad++**.
- ✓ Strong technical and analytical knowledge and **problem identification and resolving skills**.
- ✓ Experience in setting up and managing **CI/CD pipelines** using **Azure DevOps**, ensuring efficient code integration, testing, and deployment
- ✓ Collaborative team player with experience in **Agile/Scrum environments**, client communication, and cross-functional teamwork across global projects in domains such as **insurance, data platforms, and petroleum systems**.
- ✓ Strong understanding of **role-based access control (RBAC)** and enterprise-level **authentication/authorization mechanisms** using **Azure AD**.
- ✓ Committed to writing **clean, maintainable, and testable code**, following best practices and participating in code reviews to maintain high development standards
- ✓ Experience working in **AGILE** based development environment and participating in **Scrum** Sessions.

Educational Qualification:

- Currently Pursuing MCA from Suryadatta College Bavdhan.
- B.TECH. in Agriculture, Mahatma Phule University Rahuri, with 7.8 CGPA (2022).

Technical Skills:

- Frontend Languages : Reactjs, HTML 5, CSS, Bootstrap 4, TailwindCSS, KendoUI, Radzen Blazor
- Scripting Languages : JavaScript, TypeScript, JSON
- Backend Languages : .Net Core, C#, Python, FastApi
- Database : SQL Server, Postgres
- Cloud Platform : Git, Microsoft Azure, Amazon Web Services (AWS), AWS Lambda.
- DevOps Tools : Azure Devops, Monday.com, Jira
- Development tools : Visual Studio Code, Visual Studio, Radzen Blazor Studio
- Database tools : Sql Server Management Studio, pgAdmin4
- Git IDE : VS Code Git, Github Desktop
- Version Control : Git
- Operating Systems : Linux, Mac, Windows.
- Additional Skills) : Artificial Intelligence, Redux Js, Azure Application Insights, Vector Database, Langchain, OpenAI, Azure Key Vault, Azure Active Directory

Achievements:

TechStar Award (Arieotech Company's Annual Awards):

- Received glowing client feedback, directly contributing to receiving the TechStar Award.
- Highlights dedication, problem-solving abilities, and outstanding performance.

Certifications:

Issued by Udemy :-

- Real rest Web API using C#, SQL, Dapper, Json.
- Generative AI using Azure OpenAI Chatgpt.
- Blazor WebAssembly - Full Stack Web Development.
- Blazor - The Complete Guide [.Net 9] [2024] [E-Commerce].
- AI-900 Azure AI Fundamentals Exam Prep In One Day.

Issued by Coursera:

- Azure Devops Boards.
- AWS S3 Basics.

Issued by Great Learning:

- SQL for Data Science.
- Java Programming.

Professional Experience:

Full Stack Developer

Arieotech Solutions Pvt. Ltd | Oct 2022 to till date

Technology Associate

- Developed responsive websites using **Radzen Blazor, ReactJs, SQL Server and .Net/.Net core**.
- Built dynamic UI components and CPMs to streamline user form flows.
- Implemented JSON-based form rendering and patching logic for underwriting tools.
- Collaborated in CI/CD pipelines using **Azure Devops**, and version control via Git.
- Resolved cross-browser compatibility and performance issues.

Projects Summary:

Project #1:

Title : LBMC Elevate
Client : LBMC
Role : Full Stack Developer

Project Description: Elevate is a Blazor WebAssembly application designed to streamline and automate the tracking of communication program progress for team members and administrators. The system allows individual users to log and update their session attendance, speech deliveries, role-based tasks (impromptu speeches, evaluations, timers, etc.), and upload related presentation materials. Administrators can manage sessions and users, send reminders, and monitor completion metrics. The platform supports self-service updates, progress dashboards, and automated reminders to ensure accurate reporting and accountability.

Tools used : Visual Studio, VS Code, Bootstrap 4, Sql Server, Git, Azure Devops, Azure Portal, Radzen Blazor Studio and AWS Lambda.

Roles and Responsibilities:

- Designed and implemented user-facing components using Radzen Blazor (e.g. progress dashboards, session attendance grids, tabbed role tracking interfaces).
- Developed UI workflows for users to mark attendance, complete tasks, upload presentations, and review progress.
- Integrated with backend APIs (Azure Functions or Web APIs) to read/write session attendance, speech/task completion, and upload metadata.
- Created and managed upload workflows for presentation files, ensuring secure storage and retrieval (SAS URL or similar).
- Addressed penetration test findings and implemented remediation changes in the dev environment.
- Validated fixes by re-testing and capturing relevant screenshots, updating bug tracking tickets to reflect resolution.
- Led scoping sessions for new communication program features and UI designs, contributing to requirement documentation.
- Translated functional requirements (e.g. reminder triggers, role completion logic, file uploads) into technical specifications and UI mockups.

Project #2:

Title : LBMC Compensation Events
Client : LBMC
Role : Full Stack Developer

Project Description: The Compensation Events project is a web-based system aimed at simplifying and automating the tracking and processing of compensation-related events for stakeholders and team members. Key features include event creation and management, tracking of approvals or claims, submission of documentation, progress dashboards, and administrative controls for monitoring and reporting. The system is intended to provide transparency, self-service workflows, and robust reporting capabilities for compensation event life cycles.

Tools used : Visual Studio, VS Code, Bootstrap 4, Sql Server, Git, Azure Devops, Azure Portal, Radzen Blazor Studio.

Roles and Responsibilities:

- Built interactive UI components using Blazor (or Radzen Blazor) for event creation, documentation uploads, and progress tracking.
- Designed and implemented dashboards showing event statuses, approvals, and claim history.
- Ensured responsive and user-friendly interfaces for both team members and administrators.
- Created and managed upload workflows for presentation files, ensuring secure storage and retrieval (SAS URL or similar).
- Addressed penetration test findings and implemented remediation changes in the dev environment.
- Validated fixes by re-testing and capturing relevant screenshots, updating bug tracking tickets to reflect resolution.
- Led scoping sessions for new communication program features and UI designs, contributing to requirement documentation.
- Translated functional requirements (e.g. reminder triggers, role completion logic, file uploads) into technical specifications and UI mockups.
- Prepared and presented UI mockups and interactive prototypes to stakeholders (e.g. Tricia) for feedback and approval.

Project #3:

Title : LBMC The HUB
Client : LBMC
Role : Full Stack Developer

Project Description: The HUB is the front-facing intranet website for LBMC, designed as the default landing page when employees open their browsers. It serves as a centralized access point for company resources, announcements, communication tools, and applications. The platform provides employees with a seamless self-service experience to stay updated on organizational news, events, and documentation, while offering administrators easy ways to manage content, links, and internal communications. Built on modern web technologies and deployed on Azure App Services, the HUB ensures high availability, security, and scalability across the organization.

Technologies: Visual Studio, VS Code, Bootstrap 4, Sql Server, Git, Azure Devops, Azure Portal, Radzen Blazor Studio.

Roles and Responsibilities:

- Designed and developed intuitive and responsive UI components using Blazor/Radzen Blazor.
- Built dashboards, navigation menus, and content display modules for quick access to resources.
- Integrated HUB with internal systems, APIs, and content repositories to display dynamic data.
- Managed secure file/document access with Azure Blob Storage and SAS URLs.
- Developed modules for company announcements, event updates, and quick links to key applications.
- Deployed the HUB on Azure App Services with CI/CD pipelines through Azure DevOps..
- Handled environment setup (Dev/QA/Prod), configuration, and monitoring.
- Resolved penetration test issues and implemented security fixes.
- Collaborated with business stakeholders to scope out HUB features and enhancements.
- Translated business needs into technical designs and mockups for stakeholder approval.
- Gathered feedback from employees and admins to continuously improve the user experience.

Project #4:

Title : Insurance gig
Client : Insurance gig (USA)
Role : Full Stack Developer

Project Description: Designed to Make Buying & Selling of Insurance APIs.

Insurance GIG is an API marketplace that connects buyers and sellers as a better way to buy Insurance Technology. Browse, Shop, Research, and Compare vendors, services, and workflows across the supply chain.

Technologies: Reactjs, JavaScript, Bootstrap 4, TailwindCSS, JSON Schema, VS Code, .Net/.Net core Web API.

Roles and Responsibilities:

- Developed and deployed serverless functions with Azure Functions, facilitating backend processing and API integrations.
- Developed a user-friendly and responsive UI using Radzen Blazor and Blazor Studio, enhancing the overall user experience for browsing, shopping, and comparing insurance APIs.
- Configured and monitored databases using Azure SQL Database, and integrated Azure Monitor for comprehensive logging and performance tracking.
- Implemented Azure API Management for secure API management and utilized Azure Active Directory for authentication and authorization.

Project #5:

Title : LBMC Think
Client : LBMC (USA)
Role : Full Stack Developer

Project Description: LBMC Think is an AI-driven chatbot platform that enables employees to ask questions and receive answers directly from organizational documents. The solution integrates a React-based frontend with a .NET and Python backend, leveraging Azure OpenAI for natural language processing. Documents are securely stored and managed in Azure Blob Storage, and the chatbot retrieves contextual responses by searching across indexed content. The platform improves productivity, ensures secure access to knowledge, and delivers a modern self-service experience for employees.

Technologies: Python, .NET Core, React.js, Azure Blob Storage, Azure Functions, Postgresql, Artificial Intelligence, Redux Js, Azure Application Insights, Vector Database, Langchain, OpenAI, Azure Key Vault, Azure Active Directory.

Roles and Responsibilities:

- Built interactive, user-friendly interfaces for chatbot conversations, search, and document interactions. Ensured responsive design and seamless user experience.
- Developed APIs for chatbot queries, document indexing, and retrieval. Integrated Python-based AI pipelines with .NET services for smooth communication.
- Implemented Azure OpenAI & Semantic Kernel to enable natural language understanding and contextual answers from documents.
- Integrated Azure Blob Storage for secure storage and retrieval of organizational documents. Built workflows for uploading, indexing, and version management.
- Developed logic to fetch contextual responses by embedding and indexing documents, ensuring accurate chatbot answers.
- Implemented role-based access, optimized query performance, and ensured compliance with security standards.
- Worked with cross-functional teams for requirement gathering, testing, and deployment. Prepared demos and training sessions for end-users.

Strengths:

Exceptional Multitasking:

- Efficiently manage concurrent projects with ease.

Quick Skill Acquisition:

- Rapidly acquire and excel in new skills.

Ownership and leadership:

- Independently manage and deliver projects from initiation to completion, including direct client engagement.
